

PUSHSTICK TEMPLATE

Make the pushstick from plywood, at least 12mm thick.

WARNING!

Do not make it out of regular wood as the grain could be a weak point where the handle joins, you wouldn't want the handle to snap while your hand is near a spinning blade.

I made this pushstick a little shorter in length (20mm) than the ones I've made in the past. That was just to fit it onto one A4 sheet. It could easily be made whatever length you require.
